If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc. if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: _____

Inventors (please provide full names): _____

Earliest Priority Filing Date: _____

**For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.*

Process of producing a polymer as claimed in claims, please see ^{some} composition, note any composition that gives the polymer a OK, ^{some} concern for the product.

 AB The invention concerns a method for obtaining an **aq.**
dispersion of hydrophobic polymers such as Bu **acrylate-**
styrene copolymer dispersed in the form of particles with mean
 diam. less than 100 nm stabilized solely with a cationic macromol.
 surfactant based on low mol. wt. **styrene/maleic anhydride imide**
 copolymer. The invention also concerns the use of said dispersion for
 treating and sizing paper.

AB	The title polymer was obtained by imidization of polymer of 7-50 mol% maleic anhydride monomer units and vinyl arom. monomer units, carried out in that .ltoreq.75% of the maleic anhydride monomer units was imidized. Thus, 26:74 maleic anhydride- styrene copolymer having intrinsic viscosity (2 g/dL, THF, 25.degree.) 0.35 dL/g was treated with 25% NH3 soln. to imidization degree 59% with diln. with H2O to 20% solids. Paper sized with the above dispersion, addnl. contg. 10% starch, was formed into a sheet having low water absorption (DIN EN 205353) Cobb60 25 and acceptable printing (wicking) properties; vs. 41 and unacceptable printing for a dispersion of imidized (89%) polymer.				

ST paper sizing dispersion imidized polymer; maleic anhydride **styrene** copolymer imidization; water absorption sized paper; printability sized paper

AB Thermoplastic resin **compns.** uniformly and permanently rendered antistatic comprise (A) 100 parts thermoplastic resin, (B) 3-30 parts cationic copolymer (wt.-av. mol. wt. 1000-50,000) comprising 80-98% mol% of an ethylene unit and 2-20 mol% of a cationic unit, and (C) 0.1-10 parts copolymer (wt.-av. mol. wt. 800-200,000) comprising .gtoreq.1 unit each per mol. of a structural unit ($\text{CH}_2\text{C}(\text{R}_7)(\text{R}_8)$) and a structural unit of I wherein $\text{R}_7 = \text{H}$ or Me , $\text{R}_8 = \text{H}$, $\text{C}_1\text{-42 alkyl}$, Ph , or CO_2R_9 , $\text{R}_9 = \text{C}_1\text{-4 alkyl}$, $\text{Y} = \text{O}$ or NR_{10} , and $\text{R}_{10} = \text{alkyl}$, aryl , aralkyl , or a quaternary

ammonium-contg. group. Since polymer (B) exists in a continual layer near the surface of the matrix resin, the built-in antistatic properties are hardly decreased by abrasion and washing of the surface. Also, since the antistatic component (B) is precluded from bleeding out, the resin surface does not become tacky or deteriorate in printability. Incorporation of polymer (C) results in a uniform fine **dispersion** of the **cationic** polymer (B) in the matrix so that a uniform distribution of antistatic properties is obtained. Polymer (C) provides the addnl. advantage that the amt. of antistatic component (B) can be reduced to attain a given antistatic performance.

AB The **compsn.**, used for coating of thermosetting resins by applying on semicured thermosetting resins in a mold, comprise polyamines or unsatd. amines, carboxy-contg. resins, and coloring pigments and are thickened to the viscosity being 150-550 P at 25.degree.. The **compsn.** comprising (A) polyamines or unsatd. amines, polycarboxylic acids, and coloring pigments, (B) polyamines, unsatd. carboxylic acids, and coloring pigments, or (C) alk. earth metal or Zn oxides or hydroxides, carboxy-contg. resins, and coloring pigments are also claimed. Thus, a sheet molding compd. comprising unsatd. polyester 70, polystyrene-styrene soln. 30, NS 100 120, Kayabutyl B 1, Kyowamag 150 1, Zn stearate 3, and ER 4630LBD 166W (glass roving) 60 parts was charged in a heating mold, pressed for 100 s, coated with a **compn.** (viscosity 250 P) contg. a styrene soln. of 6:4:10 (mol) isophthalic acid-maleic anhydride-propylene glycol copolymer 99, hexamethylenediamine 1, Ti-Pure 900 40, Yellow 9121 (Titan Yellow) 10, NS 100 50, and Kayabutyl B 1 part, and further pressed for 120 s to give a coated product showing good appearance and color evenness.

ST unsatd polyester polyamide coating SMC; pigment **dispersibility** polyamide coating SMC

IT Polyamides, uses

RL: IMF (Industrial manufacture); TEM (Technical or engineered material use); PREP (Preparation); USES (Uses)

(epoxy, unsatd., coatings; acid- and amine-contg. resin **compsn.** with good pigment **dispersibility** for in-mold coating of thermosetting resins)

IT Coating materials

AB The title **comps.** with good weatherability and decorative property comprise 100 parts thermosetting or thermoplastic resins, 1-100 parts composite particles loaded with pigments, and 10-1000 parts solvents. Thus, styrene 92, Me methacrylate 140, Bu acrylate 20, ethylhexyl methacrylate 116, and itaconic anhydride 32 g were polymd. and neutralized with 38.5 g stearylamine and 50.8 g dimethylethanolamine to give a 51.5%-solid amphoteric polymer varnish, which was blended with 168 g carbon black and 480 g AcOEt to give a black pigment paste. Then, the paste 10, styrene 30, Me methacrylate 20, Bu acrylate 10, ethylene glycol dimethacrylate 40, and 2,2'-azobis(2-methylpropionitrile) 1 g were suspended in H2O and heated at 80.degree. to give 11%-solids suspension of carbon black-covered resin particles, 30 parts (solids) of which was blended with 351.5 parts paste contg. carbon black 3, ACR 420 (50% acrylic resin varnish) 135.8, and solvents 212.7 parts and 48.5 parts MF 004 (60% melamine resin varnish) to give a matte top **compn.** A Zn3(PO4)2-treated steel plate precoated with a cationic electrophoretic layer and a midlayer was sprayed with the **compn.** thinned with Solvesso 100-xylene-Solvesso 150 mixt., set 7 min at room temp., and baked 30 min at 140.degree. to give a coating with 60.degree. gloss .ltoreq.10% and good weatherability.

AB	Polymer compns. with high mech. strength, having a fine dispersion microstructure, comprises the reaction product of a maleic anhydride copolymer (10-65%) and 35-90% polyamide. Thus, 50 parts polycaprolactam and 50 parts maleic anhydride-Me methacrylate-styrene copolymer were coextruded at 160.degree. at shear rate 400 s-1 to give a copolymer [77875-10-6] having a fine structure as obsd. by electron microscopy. A phys. mixt. of the 2 polymers had a coarse structure. A solvent fractionation test confirmed that the hot extruded product resulted from reaction of the 2 polymers.
